DESCRIPTION OF SERVICES

Independent Living Program offers supervised apartments for male clients who are between ages 17 – 19; the average length of stay is 12 – 18 months.

The Independent Living Program is for clients who are unable to return to a family resource, are approaching adulthood, and could benefit from a supervised apartment - type setting to assist them in transitioning to a community setting. The program provides milieu therapy, case management, and opportunities for real life experiences in a controlled environment. It also provides education in household maintenance, food shopping, meal preparation, money management, accessing community resources, and obtaining employment. Program participants are required to maintain employment and contribute financially to rent and groceries. All program components prepare the client for living independently in the community.
